

### Quick Start Guide

## Pairing Pure Charge&Go BCT IX to an Android phone

Bluetooth® Connectivity Transformed

Your hearing aids use two types of Bluetooth® connections.

• Bluetooth® LE is used to connect each hearing aid individually to the Signia app for remote control adjustments. Pairing this connection is done through the Signia app.

• Bluetooth® Classic is used to connect your hearing aids jointly for streaming calls and audio. Pairing this connection is done through your phone's Bluetooth menu.

Follow the simple steps below to pair both types of Bluetooth connections. These instructions are intended as general guidance, as menu details may vary between different Android phones.

 $\ast$ 

#### Step 1

Download the Signia app (version 2.7.0 or later).

#### Step 2

Ensure your phone's Bluetooth is switched on.

Note: If your hearing aids are already paired to another device nearby, turn off the Bluetooth® on that other device during the pairing process.

#### Step 11

Your hearing aids will be listed under Paired Devices, with names beginning **LE\_** (you may see one or two listings depending on phone model).

They will *also* be listed once under Available Devices. **Tap this available hearing aid**, then **tap Pair** when prompted – **this will pair your hearing aids jointly for audio streaming**.
